# What is Paprika?

Paprika is a mobile app that connects restaurants with their customers seamlessly to help them view meals, submit and see reviews, receive new offers and events, and make a reservation.

# Why Paprika?

We aim to build and improve a restaurants' community using smart phones. With Paprika, you can discover new restaurants, check out new events and offers, and book a table easily anytime you want anywhere you are.

# Discover Restaurants

Paprika offers a nice experience to discover and find the most suitable restaurant for you and your loved ones. You can look up restaurants by cuisine, music type, location, and more.

# Menus

It's easy to explore restaurants' menus and meals using Paprika, as well as prices, ingredients, and customers' ratings.

# Events and Offers

With Paprika, you won't miss a thing! New offers and events will be delivered to you, so you can take action and reserve a table at your favorite restaurants before it's too late.

## Restaurant Reviews

Paprika helps you to make a better decision. In a community full of restaurants and customers, you will find a vast amount of reviews and ratings which reveal other people's impressions on many aspects like food, service, ambiance, and more.

# Social Media Engagement

It's not only that Paprika helps you to see events and offers, but you can also share and invite your family and friends to spend special and memorable moments together.

# Reservations

Book a table at any time for you and your loved ones in a restaurant of your choice.

# Pickups and Deliveries

Order food directly from the restaurant you prefer, and then you can pick up your order at any time or deliver it to you.

# Restaurant Management

As a restaurant manager, Paprika provides an easy-to-use web interface, which you can use to alter all of your restaurant info, manage events and offers, and handle your customers' reservations and orders.

# Paprika Inside

Give your visitors the best experience there is to order and track meals using their smart photnes. A visitor can easily scan table QR and view all meals with their variants and details. Waiters will be notified using Paprika Pager, and it's all linked with restaurant kitchens using Paprika POS.
